Voronoi Tracking: Location Estimation Using Sparse and Noisy Sensor Data

L. Liao, D. Fox, J. Hightower, H. Kautz and D. Schulz
Dept. Of Computer Science and Engineering, University of Washington

- Goal: tracking people with sparse and noisy sensor data and learning their motion patterns.
- Voronoi tracking estimates the locations of people using particle filters projected onto a Voronoi graph of the environment.
- The approach achieves higher tracking accuracy and is able to learn motion patterns of people in an unsupervised way using EM.
